Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                            NOTICE: This sequence represents the full insert of this cDNA. No attempt has been made to verify whether this corresponds to the full-length of the original mRNA from which it was derived. We have tried to obtain double-stranded, or double chemistry sequence accross the entire clone, but potentially, there are areas in the sequence where this level of coverage was not achieved. Nevertheless, we are confident of the accuracy of this sequence as all regions of low quality, as defined by PHRAP (P. Green, in preparation), were visually inspected and edited accordingly. The consensus quality values for this sequence have been submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

* NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have

* This sequence will be replaced

* by the finished sequence as soon as it is available and

the accession number will be preserved.

* 62237: contig of 62237 bp in length
6238 75937: gap of unknown length

* 75938 15937: contig of 19300 bp in length
75938 15937: gap of unknown length

New nucleic acid for the lung disease marker LU105 - polypeptides, antibodies and genes, used for diagnosis, prevention, treatment of lung disease, specifically cancer.

Claim 11; Fig 1; 123pp; English.

Sequences shown in AAV54616 to AAV54621 represent LU105 specific

~

```
contracted sequences. These are used in the method of the invention for detecting target LUIOS nucleic acid. The method comprises treating a sample with at least one LUIOS specific nucleic acid, or its complement which is at least 50 percent identical with the LUIOS specific nucleic acid sequences (AAVS4616 to AAVS4621). LUIOS is a lung disease marker. Cells transformed with a recombinant expression system that contains LUIOS specific nucleic acid fragments, are used to express recombinant LUIOS polypeptides which are used to raise antibodies. The antibodies are used to detect the LUIOS antigen, and correspondingly this antigen is used to detect the LUIOS antigen, in usual immunoassays. The LUIOS polypeptides and nucleic acid sequences are used for diagnosis, staging, nonitoring, prognosis, prevention, treatment and determination of susceptibility to, lung disease, specifically cancer. The LUIOS collection in altered form or lung disease (present at high concentration, in altered form or in an unusual body compartment). LUIOS can be detected in blood, plasma or serum in an inexpensive, non-invasive test. (Updated on 25-MAR-2003 to correct PI field.)

human signal peptide-contraining proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, curving correctives, cardiovascular and antiaschmatic activities, and can be used in gene therapy. HSPPs can be used to rreat or prevent disorders associated with increased activity or function of HSPP. Antagonists of mSPP associated with increased activity or function of HSPP. Antagonists of associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, cirrhosis, psoriasis, acquired immune deficiency syndrom, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or schame, cheart disease, microbial or other infections, congestive or ischamen, cheart disease, Alzheimer's, Parkinson's or Huntington's diseases, Schizophrenia, ovulatory defects, muscular dystrophy). HSPP nucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping, HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists, in related diseases (in usual immunoassays), as therapeutic antagonists, in related diseases (in usual immunoassays), as therapeutic antagonists, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

The invention relates to a novel isolated cDNA and a cDNA encoding pepsin C. The polynucleotide of the invention may be useful as a probe or a component within an expression vector, as a diagnostic in assessing the prognosis and treatment of a lung disorder and as a potential therapeutic or target for the identification of therapeutics for lung disorders. Furthermore, the polynucleotide may be used to produce purified proteins or peptides which can subsequently be used to produce antibodies. The current sequence is that of the human lung disorder-related cDNA (SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        177 TICTTAGTGGGCTCGGCCAAGCCTGTGGCCCAGCCTGTCGCTGCGCTGGAGTCGGCGGCG 236

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequences shown in AAV54616 to AAV54621 represent LUIOS specific polynucleotide sequences. These are used in the method of the invention for detecting target LUIOS nucleic acid. The method comprises treating a sample with at least one LUIOS specific nucleic acid, or its complement which is at least 50 percent identical with the LUIOS specific nucleic acid sequences (AAV54616 to AAV54621). LUIOS is a lung disease marker. Cells transformed with a recombinant expression system that contains LUIOS specific nucleic acid fragments, are used to express recombinant LUIOS polypeptides which are used to raise antibodies. The antibodies are used to detect the LUIOS antigen, and correspondingly this antigen is used to detect specific antibodies, in usual immunoassays. The LUIOS polypeptides and nucleic acid sequences are used for diagnosis, staging, monitoring, prognosis, prevention, treatment and determination of

susceptibility to, lung disease, specifically cancer. The LU105 polypeptides are also used to screen for specific binding agents, useful therapeutically. LU105 is a marker for lung disease (present at high concentration, in altered form or in an unusual body compartment). LU105 can be detected in blood, plasma or serum in an inexpensive, non-invasive test. (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       L-NIDD:
    polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene thorapy. ABK40254-ABK40288 encode for the human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                           138

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  318
                                                                                                                                                                                                                                 The invention provides membrane-bound PRO polypeptides and polymucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have bomology with proteins including LDL receptors, The Ilgands and various enzymes. The membrane-bound proteins and receptor immunoadhesins, for instance, can be used as therapeutic agents. Receptor receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNN. PRO nucleic acid sequences also be useful for the preparation of PRO polypeptides, especially by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121 GAGGCCGGGGCCGGGACCCTGGCCAACCCCTCGGCACCCTCAACCCGGTGAAGCTCCTG 180

PRO polynucleotides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, to specific cells, to cause targeted cell death.

2; Fig 289; 935pp; English.

The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can radiolabels or attribodies, that cause cell death. PRO nucleotide radiolabels or attribodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF4470 to AAF4470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44687 to AAF46300 represent human PRO Polynucleotide and protein sequences given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in polypeptides abloactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO154 and PRO1186 stimulate adrenal cortical capillary endothelial growth, and PRO5186 stimulate adrenal cortical capillary endothelial growth, and PRO5186 stimulate adrenal conditions or disorders where analogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular condothelial growth factor (VERGF) stimulated proliferation of endothelial cells and is thus useful for inhibiting tumour growth. PRO826, PRO1056, PRO1186 pro1184, PRO1346 and PRO1186 pro1184, PRO1346 and PRO1376 stimulated proliferation of endothelial cells and is thus useful for inhibiting tumour growth. PRO826, PRO1056, PRO1184, PRO1346 and PRO1375 stimulated proliferation of endothelial cells and pro1346 and PRO1346 and PRO1346, PRO1186 p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 stimulated T-1ymphocytes and are therapeutically useful for enhancing immune response. PR0928, PR0926, PR01068 or PR01132 enhance survival of retinal neurons coels (PR01132 is also enhances survival/proliferation of rod photoreceptor cells) and therefore are useful for treating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PR0819, PR0813 and PR011066 induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PR01310, PR0844, PR01312, PR01192 and PR01887 induce the proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This sequence represents a novel human PR0 protein polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TTCTTAGTGGGCTCGGCCAAGCCTGTGGCCCAGCCTGTCGCTGGGCTGGAGTCGGCGGGG 120

The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. The PRO polypeptides or plantic acid activity of a cell. The PRO polypeptides or plantication, as chromosome markers, or in generating probes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in cissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural sources. The sequences presented in ABX90083-ABX90468 are the penalty of the primers amplifying and the probes detecting the PRO polymucleotides of the invention. Note: The sequence data for this patent sequence. Is also available in electronic format from USPTO at sequence.thml 0 139 TICITAGIGGCICGGCCAAGCCIGIGGCCCAGCCIGICGCIGCGCIGGAGICGGCGG 198 GAGGCCGGGGCCCGGACCCTGGCCAACCCCCTCGACCCGGTGAAGCTCCTG 180 258 318 GAGCTGGGTCCCCAGGCCGTGGGGCCGTGAAGGCCCTGAAGGCCCTGGAGGGGCCCTG Ρ. gene therapy, in chromosome identification, as 61 TICTIAGIGGGCICGGCCAAGCCIGTGGCCCAGCCIGICGCIGCGCGCGAGTCGGCGCCG GAGGCCGGGGCCGCGCACCCTCGCCACCCCTCGGCACCCTCAACCTCGTG CTGAGCAGCCTGGGCATCCCCGTGAACCACACATAGAGGGCTCCCAGAAAGTGTGTGGCT Godowski P Paoni NF; Wood WI; 1 ATGAAGCTCGCCGCCCTCCTGGGGCTCTGCGTGGCCTGTGCTGCAGCTCCGCTCGTGCT CTGAGCAAGCCTGGGCCATCCCCCGTGAACCACCTCATAGAGGGCTCCCCAGAAGTGTGTGGCTT GAGCTGGGTCCCCAGGCCGTGGGGCCCTGAAGGCCCTGAAGGCCCTGCTGGGGGCCCTG Gaps 0; New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identifica chromosome markers, or in generating probes. The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking hioactive molecules to cells expressing PRO polypeptides, for inking biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The polymucleotide sequences chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of pRO polypeptides, for generating transgenic animals or knockout animals, to construct hybridisation probes for mapping the construct hybridisation malysis of malysis, Southern analysis and Western analysis. The present sequence encodes a human PRO polypeptide of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton Perrara N, Fong S, Gerber H, Gerritsen ME, Goddard A, Grimaldi JC, Gurney AL, Kljavin IJ, Napier MA, Pan J, Roy MA, Stewart TA, Tumas D, Watanabe CK, Williams PM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 2; Fig 289; 649pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-DEC-:
```

The invention describes a new isolated nucleic acid molecule comprising the full length coding sequence of the DNA deposited with the American Type Culture Collection (e.g. ATCC Deposit No. 209621, 552-973, 819-PTRA, 209439, 203135, etc); or a sequence with at least 80% identity to a DNA encoding a PRO polypeptide. The PRO polypeptides or polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Those care particularly useful for detecting or treating e.g. malignancies or lenkamia or lymphoma,), hepatitis B, multiple sclerosis, or Crohn's disease in mammals. The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases.

CC and in the diagnostic determination of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA.

The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. This sequence encodes a novel human secreted and transmembrane PRO polypeptide New genes and secreted and transmembrane polypeptides (e.g. PRO183 or PRO184), useful for treating or diagnosing e.g. ovarian cancer, Kaposi's sarcoma, leukemia, lymphoma, hepatitis B, multiple sclerosis or Crohn's DL; Godowski PJ; Paoni NF; Wood WI; Arganderedecedecerecreseserereseseserererereresesereere TICTTAGTGGGCTCGGCCAAGCCTGTGGCCCCAGCCTGTCGCTGCGCTGGAGTCGGCGGCG GAGGCCGGGGCCGGGACCCTGGCCAACCCCTTGGCCACCCTCAACCCGGTGAAGCTCCTG .. 0 Score 308.8; DB 7; Length 570; Pred. modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-CF-ENI is a normalized cDNA library containing the
following tissue(8): Primary Lung Cystic Fibrosis
Epithelial Cells. The library was constructed according to
Bonaldo, Lemnon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (IT)19 tail. The
sequence tag for this library is CTGCTCAGGT.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             263
